KEY TARGET CONSUMERS

The attraction of clear, transparent material engages the customer in more ways than one. According to a team of Belgian researchers in several studies published in the Journal of Consumer Psychology, people are naturally drawn to reflective, translucent materials because of our primitive desire for water as a vital resource. This same research found that people have an innate preference for clear rather than matte finishes on products. Consumers also equate clear products with truly clean materials. Addressing these instinctual impulses, the new King Cock Clear collection will effortlessly attract customers. Plus, given the continual popularity of pegging and anal exploration, consumers are looking for four, five, and six-inch dildos that are harness compatible.
